Maya Pratt (The Organic Meal Prep Shopper)

Maya is a 29-year-old marketing manager who lives downtown in an apartment. She works a hybrid schedule and goes to the gym four times a week. Maya does not like eating out and prefers cooking at home, which requires her to plan her meals each week. Maintaining a healthy lifestyle is important to her, and she prefers meals made from organic, minimally processed ingredients. Maya regularly attends fitness classes and follows nutritional websites and pages. The small grocery store near her apartment has limited organic options, so she usually has to visit multiple stores to find what she needs, which she finds frustrating and time-consuming.

Maya works for a company that focuses on environmental sustainability and corporate responsibility. Because of this, Maya is very mindful of where products come from and how they are produced. Maya values ethically sourced meat, groceries, dairy, fair-trade products, and businesses that are transparent about their supply chains

Maya typically shops for groceries once a week on Sunday evenings. She plans her meals for the week and checks her budget carefully. She reads product labels, cares about where her food comes from, and prefers ethically sourced meat and dairy. She avoids overly complicated websites and gets annoyed when she cannot quickly see the total cost of her cart, so she is always looking for simpler interfaces across different websites.

Maya is comfortable with technology and frequently shops online, but she expects the experience to be fast, clean, and transparent. She appreciates features like filtering, product badges, and recipe integration because it makes her life so much easier. Due to using so many different websites for grocery shopping, Maya dislikes cluttered interfaces and unnecessary steps. If checkout takes too long or pricing is unclear, she will abandon her cart. She wants a clean, simple layout where she can quickly filter products and see clear labels without having to open multiple pages. The cart total should always be visible and updated instantly so she can stay within her budget.

Daniel Thompson (The Busy Convenience Shopper)

Daniel is a 38-year-old financial analyst who works long hours and often gets home after 7 p.m. He lives with his wife and cooks a few times a week, but he doesn't have time to browse through physical stores. Convenience and reliability are his top priorities when buying groceries.

He usually places small orders two or three times a week for specific meals. He prefers to search or filter directly for what he needs, add items to the cart quickly, and check out within minutes. When he finds products he likes, he wants to reorder them without having to search again. Daniel values efficiency above all else. After long workdays analyzing financial data and managing deadlines, he does not want to spend mental energy navigating complicated grocery platforms. He prefers a clean user interface, easy search functionality, and grocery recommendations.

Because he tracks his spending carefully, Daniel appreciates transparent pricing, clear delivery fees, and instant updates to the cart total. Unexpected charges or hidden costs would immediately reduce his trust in a platform.

Although convenience is his priority, Daniel still cares about food quality. He prefers organic produce and ethically sourced meat when possible, but he does not want to manually verify every label. He expects the platform to clearly indicate quality standards through simple badges or guarantees and expects those badges to be based on honest product quality.

Daniel is very comfortable with technology. He appreciates systems that remember his preferences and reduce repeated effort. He's less concerned with reading detailed product descriptions/ingredients, but he still wants assurance that the food is fresh and high quality. He expects a fast, search-driven experience that lets him find items in seconds and reorder past purchases in just a few clicks. The checkout process should be short and smooth so he can complete an order within minutes.

Sofia Martinez (The Recipe-Guided Family Meal Planner)

Sofia is a 34-year-old elementary school teacher who lives with her husband and two children. She likes to cook healthy meals for her family, but doesn't have much time during the work week to plan and measure ingredients. Sofia's weekdays are busy with lesson planning, grading, and family responsibilities. Because of this, she prefers structured weekly planning rather than last-minute grocery trips.

Sofia usually searches for simple, balanced recipes that feed the whole family and prefers to buy exactly what she needs to avoid food waste. Estimating the right quantity of ingredients for four people is something she finds inconvenient when shopping in stores. Sofia often worries about overbuying groceries or even worse, forgetting key ingredients and the exact quantities needed to make those dishes.

Sofia's two children and her husband are food lovers. They love trying all kinds of food and recipes, which puts pressure on Sofia to balance healthy choices with making them delicious for her family, since she prefers to cook for her husband and children.

Sofia uses her laptop on weekends to plan meals for the week. She values a simple and easy-to-navigate layout and features that reduce decision-making time. Sofia appreciates categorized recipes and preparation time indicators. She wants a website that offers clear options for a variety of recipes and lets her add quantities.

She is cost-conscious but willing to pay slightly more for organic and ethically raised food that supports her family's health. She wants a recipe-based feature that automatically adds the correct ingredient quantities for her family size to the cart. Clear pricing for the full meal and an organized layout help her plan the week and stay on budget.
